

Dimension Interiors

WE CARE ABOUT THE ENVIRONMENT

Dimension Interiors Ltd has always been exceptionally aware that the construction industry can impact adversely on the environment. And we are also aware that our clients share these concerns. So our mission is to make certain that all our office spaces combine the highest quality of workmanship with the lowest possible environmental consequences. We always use the most environmentally friendly materials available, and we are constantly striving to find ways in which we can eradicate any negative effect our work may have on the environment. We also make sure that all of our suppliers are equally informed and ethical. We work with them at all times in order to minimise our carbon footprint and achieve a truly eco-friendly result.

SUSTAINABILITY AND WASTE MANAGEMENT

Dimension Interiors is fully committed to ensuring that sustainability is top priority throughout all aspects of the relocation, refurbishment or fit-out. Operating within SWAMP Regulations, redundant products are always recycled by re-specification, and site waste is clearly segregated and managed on site using different coloured bins. Disposal certification is always supplied to the client, and every effort is made to comply with environmental regulations. We are constantly improving environmental performance in all aspects of our business, by adhering to some basic principles, including developing innovative and flexible solutions for all issues that transpire within the workspace, and using environmentally friendly products whenever possible.

We also believe in sharing our experience and expertise with all our suppliers, clients and business partners so that they know how to manage their environment successfully. We consistently assess the ongoing progress of each project to make sure standards are always maintained, and we plan the work specifically to ensure that wastage is limited during the construction process.

The most important thing is to recognise how our business has an impact on the environment, and to always ensure we observe best practices. All of our design, building and delivery partners are committed to providing the client with a range of options for products and practices that will result in an environmentally-friendly office space - for today, tomorrow and the foreseeable future. Of course, sustainability can come with a cost attached, but rest assured we will always source the most appropriate products, and will always take into account your specific budget and corporate requirements.

Signed for and on behalf of Dimension.

John Hall

Chief Executive Officer Dated:

1st October 2014

Dimension Interiors Ltd has acknowledged that the key word upon which to focus our attention is sustainability.

Our business takes a committed approach to the design, manufacture, supply and reclamation of materials and products. With our use and reclamation policies, we aspire to reduce all environmental impacts from design to installation. We believe in taking responsibility for our own actions rather than relying on third parties or abdicating our responsibilities by offsetting. The process of sustainability is one we understand, and we follow this in everything we do. The company is proud of its achievements in the area of environmental performance and undertakes all practices where possible, to reduce adverse environmental impacts and associated hazards in product use and disposals.

Dimension Interiors Ltd will:

- Make every effort to reduce used resources, use environmentally safe and sustainable resources, and products manufactured from materials which are capable of being recycled.
- Reduce the creation of waste, especially hazardous waste, and dispose of all wastes, which are not practical to recycle through safe and reasonable methods, which are in compliance with all relevant legislation.
- Train and motivate all employees so that they conduct their activities in an environmentally safe manner, are made aware of how their actions impact on the environment and are fully conscious of the company's environmental policy.
- Operate within the constraints of environmental management systems.
- Develop and maintain, where significant hazards exist, emergency plans for preventing and mitigating the hazardous impacts associated with them, in conjunction with the emergency services, relevant authorities and local community.
- Commit to prevent pollution of air, land or water and, where such pollution occurs or exists, to remedy the situation effectively.
- Ensure that a full environmental review of activities is undertaken every twelve months.
- Review key suppliers and contractors, encourage use of environmental management systems through the rating system and record the results on the register of approved suppliers and contractors.
- Listen to employees and other interested parties in respect of concerns about hazards and impact of operations.
- Issue this Environmental Policy placing it on notice boards in the office and issuing copies to suppliers, contractors and to customers as necessary.
- Continually review energy and water usage and where possible, investigate and offer products from either the ETL or WTL listing for energy reduction, renewable energy sources and water conservation.
- Seek to develop and install environmental performances evaluation criteria and associated indicators to clients and their premises.
